## 10NS-800-DR

**High Speed High Current Driver**

### Description

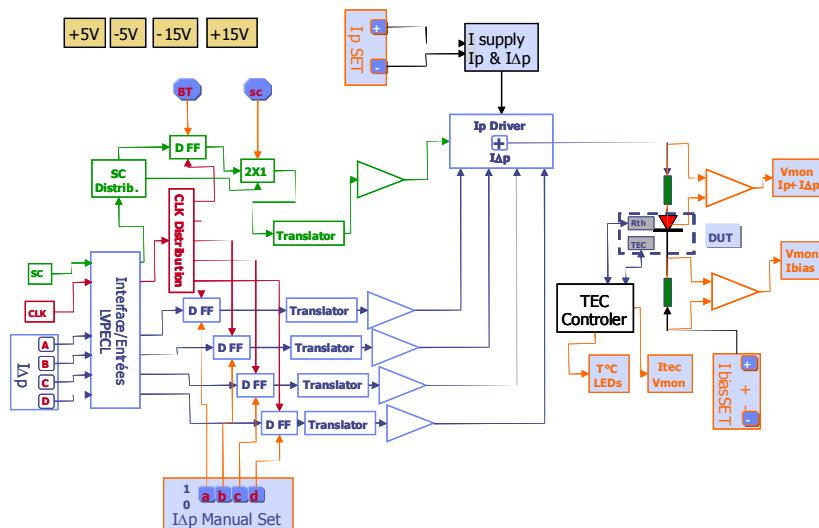

The **10NS-800DR** is a high speed current driver board capable of delivering 800mA in 10ns to an optoelectronic laser or amplifier. The board accepts Butterfly packaged devices with TEC operating parameters up to 2.3V and 3A. The anode and cathode of the optoelectronic device have to be floating (not connected to case). The input control signals are in LVPECL logic, accessible via SMA or 14 pins connector. The current is send to the device when the "Signal Control" is set at logical level one, and triggered on the positive transition of the "Clock" signal. Drive current can be dynamically adjusted thanks to a 4 bits digital control command. Power supply voltages are +/- 5V and +/-15V. The board is equipped with its own heat sink.

### Features

- High speed,  $t_r = 10\text{ns}$  typ.
- 800mA drive capability
- On demand current dynamic setting
- Pre bias
- Peak current adjustment
- Manual or dynamic current control
- Synchronization of current switching and level adjustment
- TEC management
- Current monitoring
- Temperature monitoring
- Equipped with heat sink
- $171 \times 200 \times 50 \text{ mm}$

### Applications

- Laser driver
- Optical amplifier driver
- Fiber system
- Optical switching

**Front panel controls**

Name	Symbol	Function
Test Button	BT	Active when in "1" position : allow a,b,c and d manual setting, Ip manual setting, Ip monitoring and CW current drive ( $Ip + \Delta ip$ )
Trig enable	sc	Disable Clk trigger function when in logical "1".
Manual A set	a	Defines A ( $\Delta ip$ ) value for testing, when BT = "1".
Manual B set	b	Defines B ( $\Delta ip$ ) value for testing, when BT = "1".
Manual C set	c	Defines C ( $\Delta ip$ ) value for testing, when BT = "1".
Manual D set	d	Defines D ( $\Delta ip$ ) value for testing, when BT = "1".
Current monitoring	Ip	Access to a voltage value image of the current (total)
Ip setting +	Ip +	Pushing the Ip+ button will increase the Ip value (64 steps)
Ip setting -	Ip -	Pushing the Ip- button will decrease the Ip value (64 steps)
Ground	GND	Ground reference for Ip and $T^\circ C$ voltage
Bias current monitoring	Ibias	Access to a voltage value image of the bias current Ibias
Ibias setting +	Ibias +	Pushing the Ibias+ button will increase the Ibias value (64 steps)
Ibias setting -	Ibias -	Pushing the Ibias- button will decrease the Ibias value (64 steps)
Temperature monitoring	$T^\circ$	Access to a voltage value image of the optoelectronic device. LED color code : green = $25^\circ C$ , blue < $24^\circ C$ , red> $26^\circ C$
Stand by	SD	Stand by mode, no control, no current, low power consumption.

## Signals description

Signal	Symbol	Function
Signal Control	SC	Automatic mode (sc switch at 0): "1" level allows current $I_p$ to pass in optoelectronic device, triggered on positive transition of Clock signal. Logical "0" level stops the current. Semi-automatic mode (sc switch at 1): No trigger function of Clock signal. A "1" level allows current $I_p$ to pass in optoelectronic device. Logical "0" level stops the current.
Clock	Clk	Active on positive transition. On automatic mode, synchronizes SCI, A, B, C and D signals.
Amplitude control A	A	Bit 1 - LSB (among 4) defining current increase $\Delta I_p$ above $I_p$ .
Amplitude control B	B	Bit 2 (among 4) defining current increase $\Delta I_p$ above $I_p$ .
Amplitude control C	C	Bit 3 (among 4) defining current increase $\Delta I_p$ above $I_p$ .
Amplitude control D	D	Bit 4 - MSB (among 4) defining current increase $\Delta I_p$ above $I_p$ .

## Truth table and chronogram

Input Signals (LVPECL)						Switchs Front Panel					I (Current)	
SC	A	B	C	D	CLK	BT	sc	a	b	c	d	I (Current)
0	X	X	X	X	X	0	0	0	0	0	0	Ibias
1	0	0	0	0	1	0	0	0	0	0	0	Ibias + $I_p$
1	A	B	C	D	1	0	0	0	0	0	0	Ibias + $I_p$ + $\Delta I_p$
X	X	X	X	X	X	1	X	0	0	0	0	Ibias + $I_p$
X	X	X	X	X	X	1	X	a	b	c	d	Ibias + $I_p$ + $\Delta I_p$
0	X	X	X	X	X	0	1	0	0	0	0	Ibias
1	0	0	0	0	X	0	1	0	0	0	0	Ibias + $I_p$
1	A	B	C	D	X	0	1	0	0	0	0	Ibias + $I_p$
1	A	B	C	D	1	0	1	0	0	0	0	Ibias + $I_p$ + $\Delta I_p$

## Current dynamics

Figures 1 and 2 show the  $I_p$  and  $\Delta I_p$  maximum current dynamics for two different board settings.

$I_p$  is set manually between  $I_{pL}$  and  $I_{pH}$  using  $I_p+$  /  $I_p-$  buttons. The  $I_p$  value is automatically stored in a non volatile memory. Current value can be monitored through a test point (connect a volt meter).

On board switch "SW7" splits the current dynamic in two parts, with a ratio of 2 for the maximum current.

Figures 1 and 2 bellow show the current  $I_p+\Delta I_p$  (mA) as function of  $I_p$  and  $\Delta I_p$  commands.

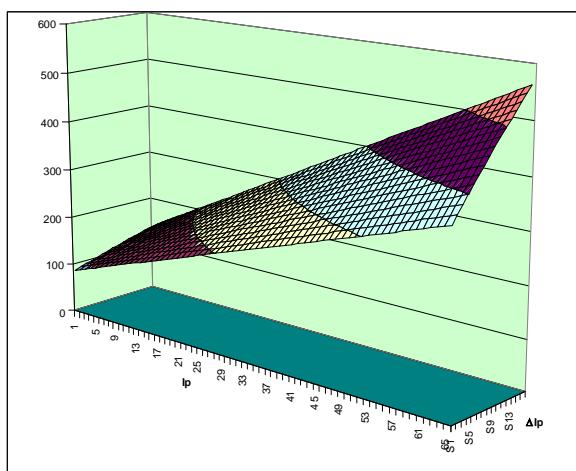

Fig 1 : Medium current setting dynamics

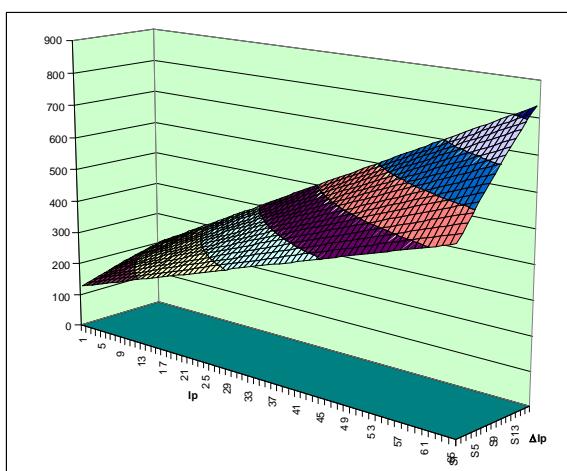

Fig 2 : High current setting dynamics

OE is fixed on heat sink with four 2mm screws.

CON1	Power supply connector (6pins)
CON2	Signal connector (14 pins)
SMA	SMA signal connectors 2x6
SW7	Current dynamic setting Low/High
SW9	TEC current and voltage setting Low/High
OE	Optoelectronic device

## Handling

This product is sensitive to electrostatic discharge and should not be handled except at a static free workstation. Take precautions to prevent ESD; use wrist straps, grounded work surfaces and recognized anti-static techniques when handling the **10NS-800DR** module.

Care should be taken to avoid supply transient and over voltage. Over voltage above the maximum specified in absolute maximum rating section may cause permanent damage to the device.

## Ordering information

Product code	Max peak current
VLI 00005 AA	560 mA
VLI 00005 AD	800 mA
