

1μm High Power Femtosecond Pulsed Laser

Calmar's FPL-03U is a 1.06 μm high power femtosecond fiber laser. It is a passively mode-locked femtosecond fiber laser featuring up to 400mW average output power and wide range of pulse widths from 0.1 to 10 ps.

FPL-03UFF generates optical pulses at fixed wavelengths while FPL-03UFT operates at a widely tunable range throughout 1030 ~ 1070 nm.

FPL-03U is simple and intuitive to operate. The operation is turn-key and requires neither external RF source nor warm-up.

The optional synchronization output frequency can be the fundamental or harmonic of the repetition rate of the laser.

FPL-03U is a versatile optical source, with combined advantage of high power and ease-of use. It is ideal for micro machining, material processing, biomedical instrumentation, terahertz imaging, semiconductor testing and metrology.
